

3065B-20V

Cordless Preemption Emitter

RECT-37-VLF

The model 3065B-20V coded programmable cordless emitter operates from a built-in light weight battery and gives you complete freedom of movement to test and study optical preemption system detector installations. The 3065B-20V has a range of 2500 feet and is rechargeable from 110VAC. The 3065B-20V is molded from high impact plastic and includes on-off switch.

The 3065B-20V can be programmed to emit any TOMAR code of either emergency band or transit band using the 3065-PROGCAB cable and ECMP5 3.2 software.

An optional visible light filter can be added to make emitter operation invisible.
